

Product: Snitsa cabinet with sliding doors – Attaching castors

- Always handle the cabinets inside, within tempered areas.
- Be careful when handling the cabinets, do not scratch or drop etc.
- When placed upon its back. First clean the designated area and place on a soft material/surface.
- Place the two castors that include a locking mechanism next to the cabinet front and the remaining castors as in the drawing.
- At first place the bolt through the castors plate and insert it into the designated, prepared destination. Attach it quite firmly but make sure that it still allows movement.
- Then arrange the castors plate so that it is right angled to the cabinet base and attach it with the wooden screws. Finish by fixing the bolt.
- Clean the cabinet with a damp cloth (may be a bit dusty after transportation and or assembly in unfinished areas.).
